993 TURBO CARRIER · COMPLETE FUNCTIONAL-LAW CANDIDATE

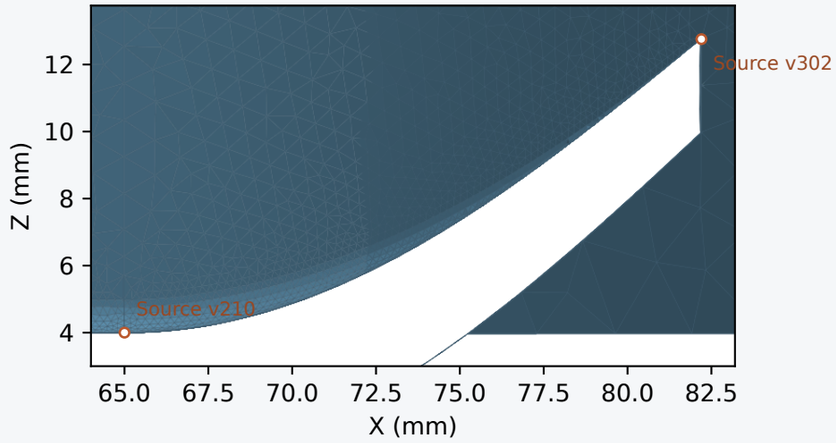

The retained geometry, in its original coordinates

Actual binary STL · no remeshing, decimation, displacement or new native CAD operation

A / Complete candidate surface

B / Junction display crop

637,850 actual triangles | Native mass 1.262364410 kg

All complete STL faces are retained in the overview. Camera: 30° elevation, 0° azimuth.

Close-up: source edge 431 endpoint region, expanded by the 1 mm radius ceiling.

The source markers are original contour datums; they are not new surface or stress measurements.

Generation candidate only. This image grants no interface, surface-audit, mechanical or manufacturing qualification.

BREP 07b354e3716b… / STL 8d0b09b705e1… / Generation ROOT 1f26c9dd… / Native mass ROOT 0fbfbcdd…

Source units: millimetres. Flat face lighting and painter-sorted detail serve visual readability only.
